# WHY DID I CHOOSE ANGULAR.JS

By: Nicole Stiner  
WIA Presentation 1601

- I've had a lot of practice with it in the past
- Allows you to extend HTML vocabulary, which makes for an easy-made application
- Uses Data Binding which takes away DOM Manipulation (which always gave me a headache!!)
- Can create your own HTML syntax that is unique to your application by using directives.
- Last but not least.. LESS CODING! Makes for an easy-to-make application that is up and running in no time!
